

SASS Cheat Sheet

Watch Folder:

- The below command will watch a folder called "scss" and write css to a folder called "styles"

```
$ sass --watch scss:styles
```

Set output type to expanded:

- Expanded outputs the CSS in a manner that is similiar to how stylesheets are written by hand...This comes down to personal or project preference.

- Options

- > nested (default)
- > expanded
- > compact (one line CSS)
- > compressed (no white space)

```
$sass --watch --style expanded scss:styles
```
